(54) Title: IMPROVED ELECTRO-OPTICALLY ACTIVE DEVICE

(57) Abstract: This invention relates to an electro-optically active display device, comprising at least one individually addressable pixel, each pixel being provided with an obstructing element(3), such as a reservoir light shield, a black matrix or a mirror element. According to the invention, a portion of at least one component is positioned beneath the obstructing element in such a way that the portion is not visible for a viewer of the display device.
